System - PHP Framework

von Ulf Gebhardt

16. Februar 2016

Inhalt

Was ist ein Framework

Middleware

„Middleware ist eine zusätzliche Schicht zwischen Betriebssystem und Anwendungen.“ Wikipedia

Aufgaben und Funktion einer Middleware

- Versteckt komplizierte Systeme
- Bietet einfache Schnittstellen
- Modularisierung von Software
- Konkreter und beschränkter Anwendungsbereich

Alternative PHP-Frameworks

Zend Framework

http://framework.zend.com/

Laravel

https://laravel.com/

Symphony

http://symfony.com/

System - PHP Framework

Anwendungsbereich von System

System kann in PHP-basierten Anwendungen eingesetzt werden.

- Websites
- Webtools
- Webapps

Features von System

System vereichfacht die Entwicklung von PHP basierten Anwendungen

- Kapselung
- REST Schnittstelle
- Moderne Webtechnologien
- Utilities
- Modulare GUI für administrative Aufgaben

Teilintegration möglich

Klassische Struktur von PHP Projekten

Die klassische Struktur von PHP Projekten orientiert sich oft an der HTML Struktur.

```php
<?php
$something = "classname";
$ip = "127.0.0.1";
$port = "8080";
?>
<!-- This works -->
<p>Your IP: <?php echo $ip.":".$port?></p>

<!-- This doesn't work -->
<p class="<?php echo $something?>">Hello</p>
<p class="<?=$something?>">Hello</p>
<span data-ip="<?php echo $ip.":".$port?>">Click here</span>
```

Klassische Struktur von PHP Projekten - Nachteile

- HTML Code ist unübersichtlich
- Programm ist eine Datei, zerteilt in Abschnitte
- Definitionen in anderen Abschnitten des Programms
- Spezialwissen notwendig für die Wartung

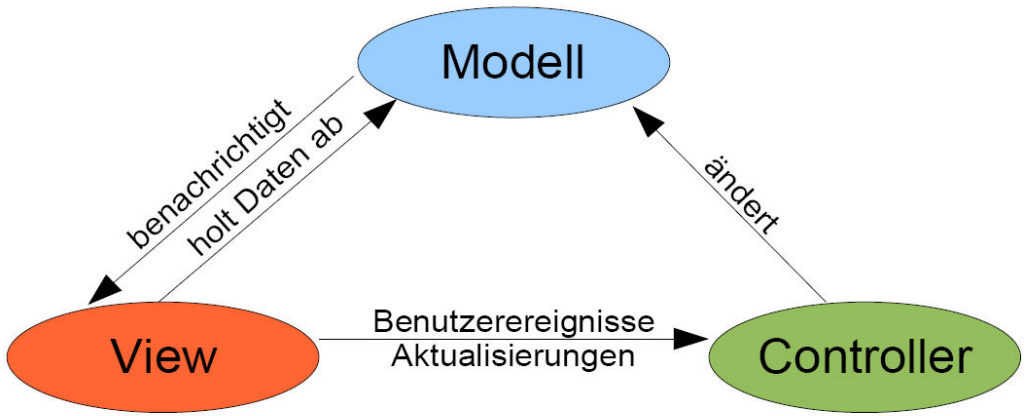
Kapselung in System

Eine Gute Kapselung vereinfacht die Übersicht über das Programm.

- nach Sprache
- nach Art der Rückgabe (Website/Daten/Administratives)
- nach Sinneinheit (Seiten/Module)

Kapselung nach Sprache - MVC-Modell

Der Begriff model view controller (MVC) ist ein Muster zur Strukturierung von Software-Entwicklung in die drei Einheiten Datenmodell, Präsentation und Programmsteuerung. (wikipedia)



Kapselung nach Sprache

Die Kapselung nach Sprache implementiert ein MVC-Modell

MVC durch Kapselung nach Sprache

- PHP (Controller Server)
- SQL (Model)
- JS (Controller Client)
- CSS (View)
- HTML (View)

Kapselung nach Art der Rückgabe

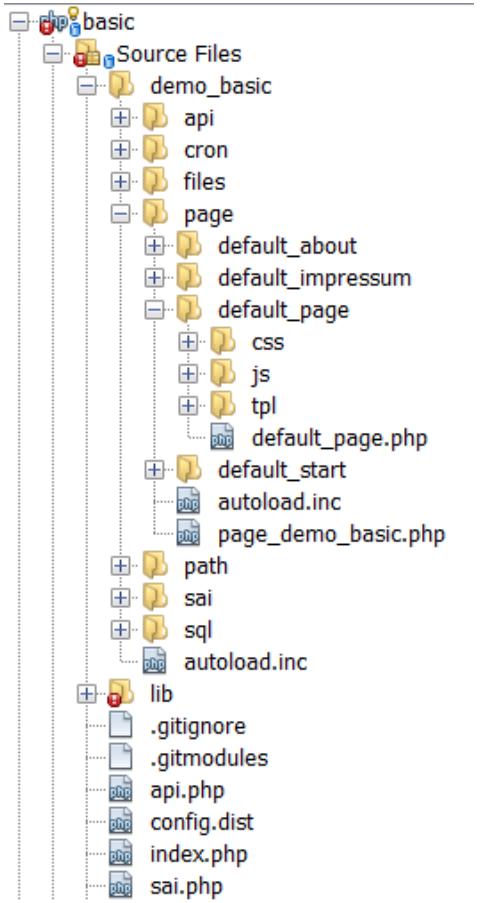
Endpoints Kapseln die Rückgabe

- index.php - Webpages/HTML Rückgabe
- api.php - JSON-Daten/Steueranweisungen
- sai.php - Administrative Aufgaben
- (setup.php - Install Scripts)

Kapselung nach Sinneinheit

- Ordnerstrukturen ordnen den Code
- Modulare Schnittstellen - pages, sai module
- Frei wählbar

Das PHP-Feature “autoload” ermöglicht es Klassen bei Bedarf nachzuladen.



REST in System - quality APIs

Funktion

- Mapping von URL-Parametern auf Funktionsnamen
- Regeln definiert zulässige Aufrufe
- Parameter-Typ-Prüfung

Nutzen

- Sicherheit
- Zuverlässigkeit
- Persistenz

Moderne Webtechnologien, von System unterstützt

- Hashbang Crawling-Scheme - #!adresse
- JQuery & Bootstrap
- SCSS(SASS)
- Minify
- Git

Utilities von System

- Simples Template System - ${var}
- Verstecke Server Struktur - Dateien bereitstellen, Cache
- Erweiterbare Configuration
- Cron Job Verarbeitung
- Rudimentäres Documentations-System
- Library Schnittstelle - bindet php,js,css
- Log - Überall, Gekapselt, Zentral verwaltet
- Security, Nutzerverwaltung
- Erweiterbares Installations-Script

Codebeispiel - Template System

default_page.tpl

Source | History

```

        </div>
    </body>
</html>
```

System Admin Interface - SAI

Das System Admin Interface verwaltet System Tabellen und Funktionalität.

- Modular - erweiterbar
- Log - Alle fangbaren Fehler, die auf der Website auftreten
- Analysis - Besucher, Logins, Fehler
- Nutzerverwaltung
- Text, Cache, Cron, Config, Todo, Git, ...

SAI - Start

Welcome to the TinyMCE editor demo!
Feel free to try out the different features that are provided, please note that the MoxieManager specific functionality is part of our commercial offering. The demo is to show the integration.
Got questions or need help?
If you have questions or need help, feel free to visit our community forum! We also offer Enterprise support solutions. Also do not miss out on the documentation, its a great resource wiki for understanding how TinyMCE works and integrates.
Found a bug?
If you think you have found a bug, you can use the Bug Tracker to report bugs to the developers.
And here is a simple table for you to play with.
Product Cost Really?
TinyMCE Free YES!
Plupload Free YES!
Enjoy our software and create great content!
Oh, and by the way, don't forget to check out our other product called Plupload, your ultimate upload solution with HTML5 upload support!

Hinzufügen
dasense © WebCraft Media 2015

Vorteile bei Einsatz von System

- Kompakt und Einfach
- Noch jung, keine starren Strukturen
- Git kompatibel
- frei (`https://github.com/webcraftmedia/system`)

Nachteile bei Einsatz von System

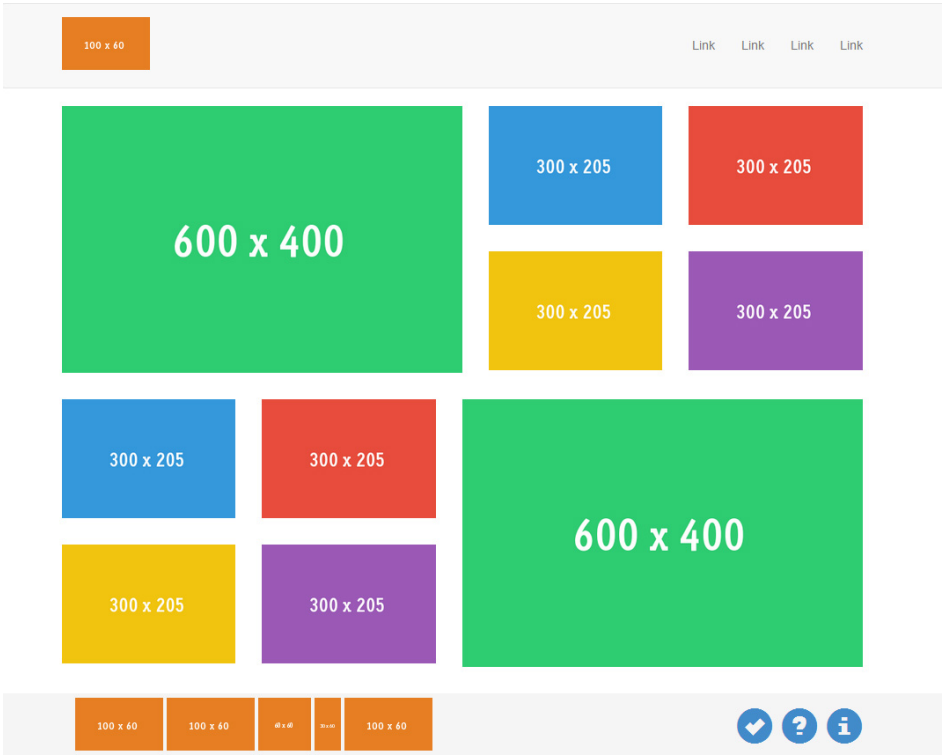
- Geringe Verbreitung
- Geringer Anteil an Dokumentation
- Unzureichende Nutzerverwaltung

Ausblick - Bootstrap

- Bootstrap Grid
- Col füllen/nachladen
- Bootstrap Menü

Nutzen

- “Click Click” Webseiten
- Noch einfacher
- Wiederverwertung von Templates/Code

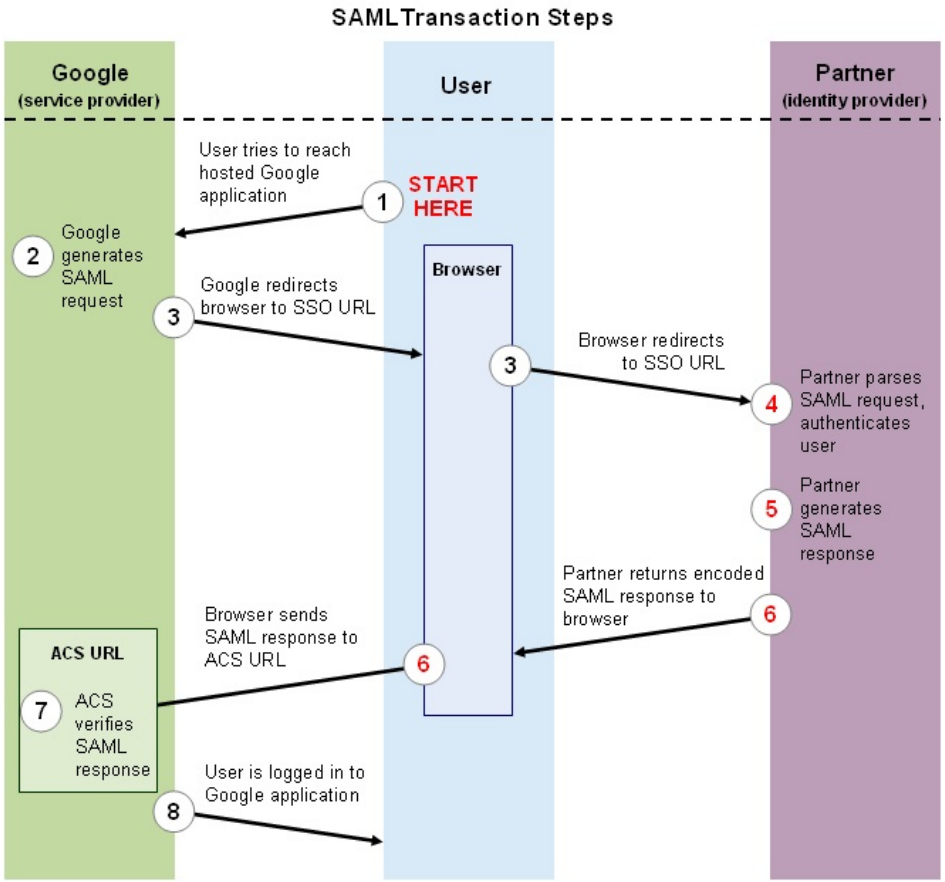


Ausblick - Usermanagement

- unzureichend
- umständlich
- Tabelle pro Projekt

SAML

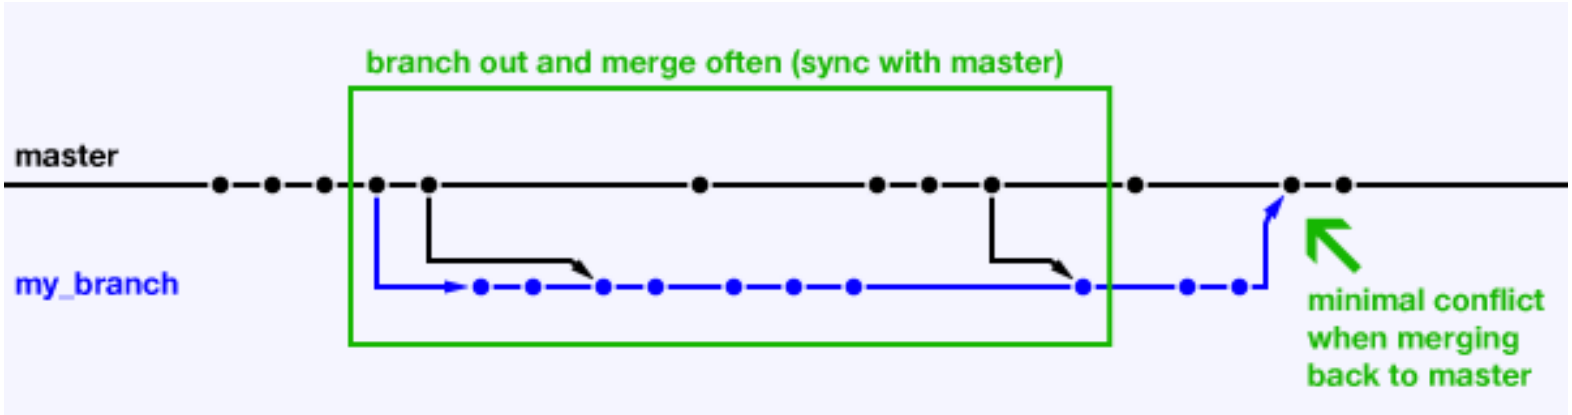
- IDPs
- SPs
- verwaltung mehrer Seiten, Zentralisierung



Versionskontrolle

Was Ist Versionskontrolle?

Git Branch



branch out and merge often (sync with master)
master
my_branch
minimal conflict
when merging
back to master

Git Workflow

Welche Versionskontrollsystem gibt es?

- Git
- Mercurial
- SVN
- Andere (2005)

Welches Versionskontrollsystem ist das richtige?

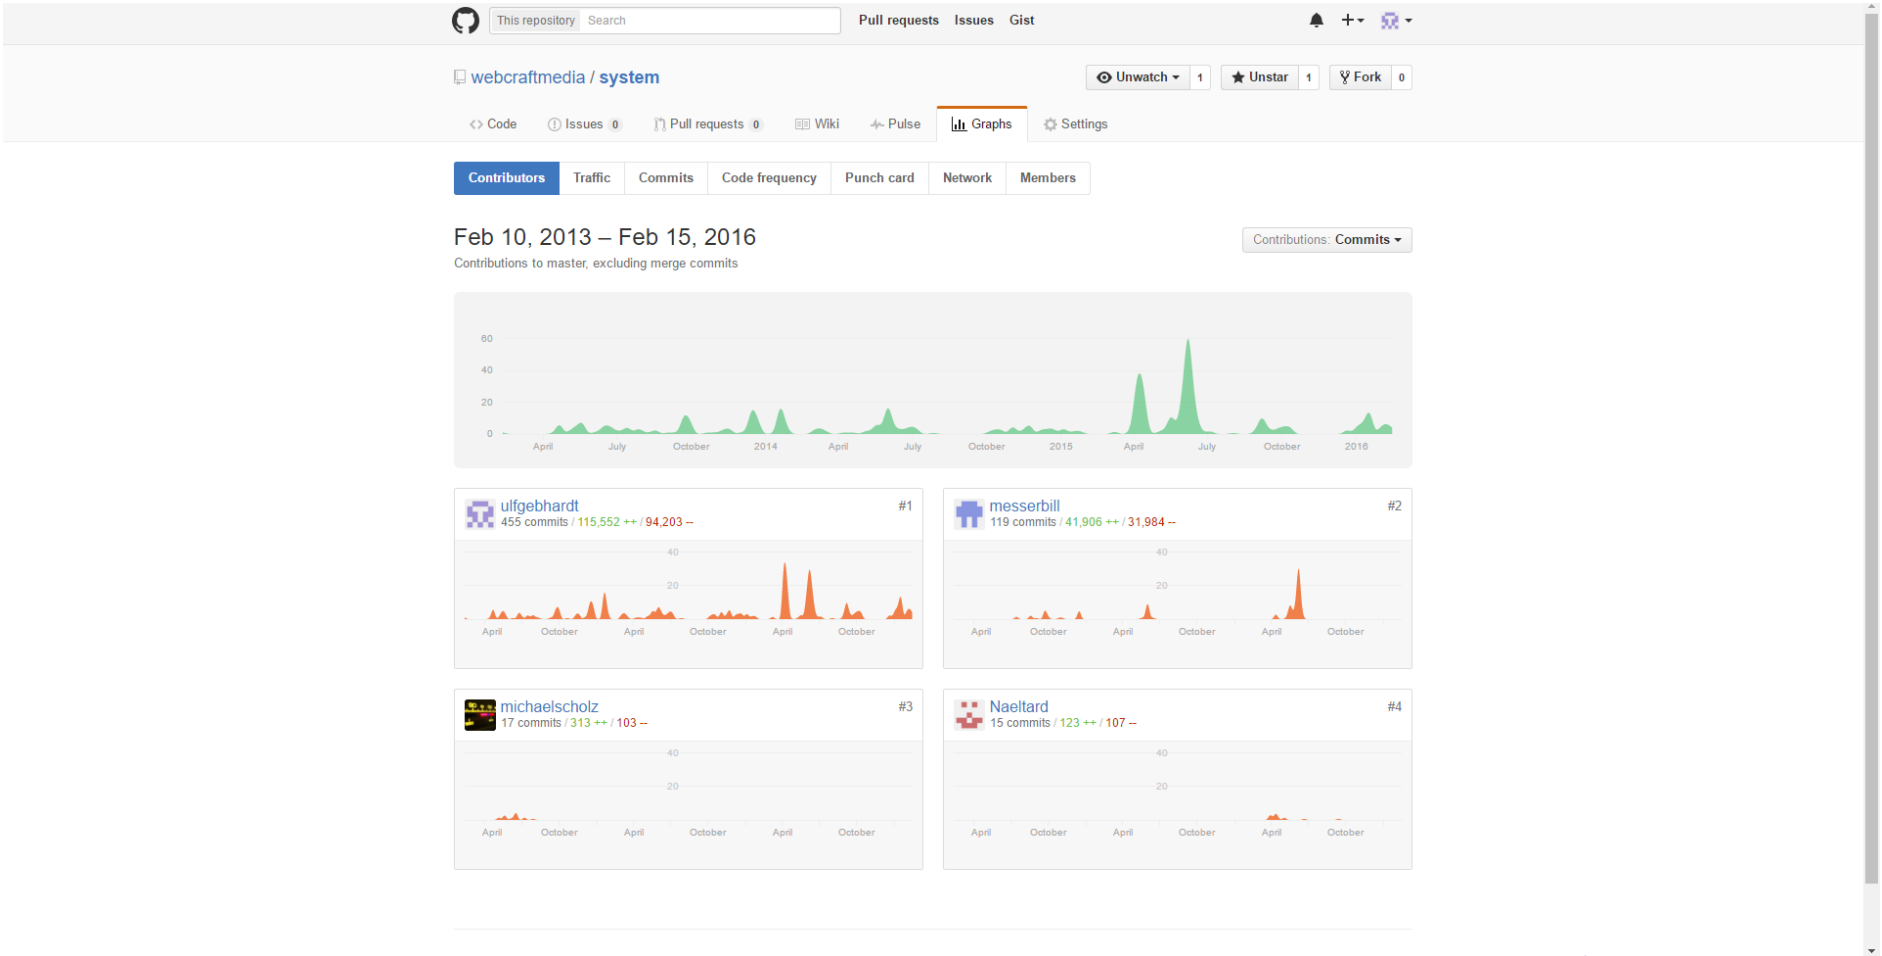
- Mercurial (code.google.com)
- SVN (Probleme, zu alt)
- Git (github.com - Die Bibliothek von Alexandria des 21. Jahrhunderts)

Features von GIT

Git ist zentraler Bestandteil jeder modernen IT-Firma.

- Kontrolle der Entwicklung/Abrechnung
- Motivation
- Deploy
- Mehrere Entwickler können an dem selben Projekt arbeiten
- Backup inklusive Historie

Projektverlauf visualisiert über Git



Software Empfehlungen - Entwicklung

Versionskontrollsoftware für GIT

- Git Console
- Tortoise Git
- Smart Git (commercial)

Git Console

System - Gems

API - REST in System

URL

`http://www.example.com/?page=start`

Regeln

system_api (7×1)

ID	group	type	parentID	parentValue	name	verify
1	1	0	-1	(NULL)	page	(NULL)

Funktion

public static function page_start()

API Class Beispiel

```php
<?php
class api_dasense extends \SYSTEM\API\api_system{
    //#Sensor & Geopoint
        public static function call_page_page_sensor($sensorid){
            return page_sensor::json($sensorid);}
        public static function call_page_page_geopoint($lat,$long,$radius,$datatype){
            return page_geopoint::json($lat, $long, $radius, $datatype);}
        public static function call_page_page_geopoint_flag_explore($lat,$long,$radius,$datatype){
            return page_geopoint_explore::json($lat, $long, $radius, $datatype);}

    //#Accountcalls
        public static function call_account_action_login_flag_compatibility($username, $password_sha, $password_md5, $locale, $deviceinfo){
            return DasenseAccount::login($username, $password_sha, $password_md5, $locale, $deviceinfo);}
        public static function call_account_action_login_flag_repairSHA($username, $password_sha_wrong, $password_md5, $password_sha_new, $locale, $deviceinfo){
            return DasenseAccount::login($username, $password_sha_wrong, $password_md5, $locale, $deviceinfo, $password_sha_new);}
        public static function call_account_action_create_flag_compatibility($username,$password_sha,$email,$locale, $deviceinfo){
            return DasenseAccount::create($username, $password_sha, $email, $locale, $deviceinfo);}
        public static function call_account_action_update_change_password($username, $password_sha_old, $password_sha_new){
